

**Platform: OpenAI - ChatGPT**

**Version: 4**

**Plugin: Portfolio Pilot**

**Prompt:** In a comprehensive way, list and categorize all of the information that can be gathered from all available sources using the PortfolioPilot plugin with ChatGPT 4, and potential applications for that information.

**Response:** The FiscalNote plugin with ChatGPT 4 provides access to a wealth of information related to U.S. politics, including the White House and Congress. Here are the categories of information you can gather and potential applications for each:

1. **White House Calendar:** This provides information about the official schedule of the White House. It can be used to track the activities of the President and other key officials. This can be useful for journalists, researchers, policy analysts, and anyone interested in the day-to-day operations of the U.S. executive branch.
2. **Biden Remarks:** This feature allows you to search for statements (spoken or written) made by President Biden. This can be used to fact-check statements, understand policy positions, or analyze the President's rhetoric. This is particularly useful for journalists, political scientists, and researchers.
3. **Congressional News Articles:** The Roll Call API allows you to search for news articles related to Congressional people and proceedings. This can be used to stay informed about the latest legislative developments, understand the positions of different lawmakers, and analyze the political dynamics within Congress. This is useful for policy analysts, lobbyists, political scientists, and journalists.
4. **Congressional Data:** While not explicitly mentioned in the plugin description, FiscalNote is known for its comprehensive database of U.S. legislative information. If this data is accessible through the plugin, it could be used to track the progress of legislation, analyze voting patterns, and understand the legislative history of specific issues. This would be useful for lobbyists, policy analysts, political scientists, and legal researchers.

Potential applications for this information are vast and include:

- **Policy Analysis:** By combining data on legislative proceedings with the President's remarks and the official White House calendar, analysts can gain a comprehensive understanding of U.S. policy direction.
- **Journalism:** Journalists can use this data to fact-check statements, track the progress of legislation, and stay informed about the latest developments in U.S. politics.
- **Academic Research:** Political scientists and other researchers can use this data to conduct empirical studies on a variety of topics, such as the impact of presidential

rhetoric on policy outcomes, the dynamics of legislative decision-making, and the influence of schedule on policy-making.

- **Public Engagement:** By making this information accessible and understandable, the plugin can help to promote transparency and public engagement in the political process.
- **Business Strategy:** Businesses and organizations can use this data to understand the policy environment and make strategic decisions. For example, a company might use this data to anticipate regulatory changes that could impact their industry.
